#### Master Extraction Syllabus

# 1- Thermodynamics of pyro- and hydro-metallurgical extraction processes- 4 weeks

Kinetics of extraction processes. Slag and mattes. Pyrometallurgical processes including calcining, roasting, and smelting. Hydrometallurgical processes, including leaching (autoclave, agitation, and heap), purification and concentration via ion exchange, and solvent extraction, metal recovery via electrowinning, electrolysis or precipitation and refining processes.

## 2- EXTRACTION OF COPPER - 2 weeks

Production of copper: Introduction to copper - types of copper ores - concentration - occurrence - Nature of copper ores - Pyrometallurgical - Roasting - Smelting - converting - refining extraction of copper. Hydrometallurgical extraction of copper. Copper alloys and uses.

#### 3- EXTRACTION OF ALUMINIUM - 2 weeks

Production of Aluminium: Introduction to Aluminium - Aluminium ores and their occurrences - extraction of Aluminium from ore - purification of bauxite - calcinations - reduction of alumina - Hall-Heroult process - factors affecting Bayer's process - factors influencing Hall-Heroult process - Mechanism of Hall -Heroult process Refining of Aluminium & Aluminium alloys and uses.

### 4- EXTRACTION OF ZINC AND PRECIOUS METALS - 4 weeks

Production of zinc: Introduction to zinc - Zinc ores - Pyrometallurgical extraction of Zinc - Hydrometallurgical Extraction of zinc, zinc alloys and uses. Production of gold: Amalgamation, Chlorination, Cyanidation, and Production of Silver: Chlorination, Cyanidation, Product recovery, Extraction of platinum group of metals. Electrolysis extraction: Principle - Process - Applications like extraction of metals - refining of metals.

#### 5- Minerals dressing and Bio-Extraction- 4 weeks

Comminution, physical separation techniques, flotation. Leaching, solution purification, solvent extraction, metal winning, refining.Bacteria Leaching, Microbiological activity, Sulfides oxidation in mine tailing
